1. (Currently Amended) A computer-implemented method comprising:
 - generating a list of accounts;
 - selecting a selected account by detecting selection of one of the accounts, wherein the selecting a selected account is performed using a computer;
 - generating a list of orders associated with the selected account, wherein the list of orders comprises orders that have been submitted to an external provisioning system for provisioning, and the computer and the external provisioning system are communicatively coupled to one another;
 - selecting a selected order by detecting selection of one of the orders that has been submitted for provisioning by the external provisioning system, wherein the selecting a selected order is performed using the computer;
 - detecting a request to make a change to the selected order, wherein the request comprises a change to the selected order;
 - incorporating the change in the selected order;
 - submitting a re-submitted order by submitting the selected order for provisioning by the external provisioning system; and
 - synchronizing the re-submitted order in [[an]] the external provisioning system to override the one of the orders that had been submitted for provisioning.
2. (Currently Amended) The computer-implemented method, as set forth in Claim 1, further comprising:
 - generating a list of items comprising the selected order;
 - determining whether each item in the list of items has been delivered;
 - selecting a selected item by detecting selection of one of the items; and
 - allowing a user to reconfigure the selected item if the selected item has not been delivered.
